

TRIANGLES: SIDE BY SIDE BY SIDE

Triangles can be classified, or sorted, based on their side lengths.

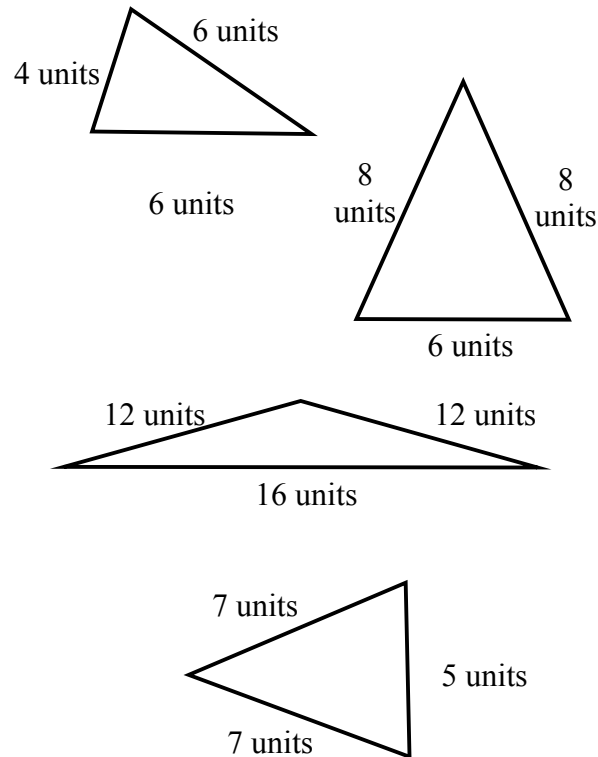

equilateral triangle

An **equilateral triangle** has all congruent sides. All sides on an equilateral triangle are the same length.

isosceles triangle

An **isosceles triangle** has two congruent sides. Two sides of an isosceles triangle are the same length – the third is not.

scalene triangle

A **scalene triangle** has no congruent sides. No sides on a scalene triangle are the same length.
